

Computational Statistics

Home work project 21

Raymond Bisdorff

University of Luxembourg

18 décembre 2019

This project concerns the validation or not of the claim that two given random sequences, $X1$ and $X2$, each of length 10000 : see <http://sma.uni.lu/bisdorff/CompStatDec18/project-21Data.csv> have been obtained from the same RNG.

Work to Do

1. Compare statistically and graphically the two given random sequences $X1$ and $X2$.
2. Are the given sequences $X1$ and $X2$ potentially drawn from the same RNG ?
3. Motivate your answer with arguments taken from the Computational Statistics Course.

Project 21 : Work to do – continue

1. You are requested to upload on the moodle page of the Computational Statistics course the results of your home work projects : source code with documentation, graphics and technical comments (in a single zip archive if multiple files) for Friday, January 31, 2020, 13h00.
2. Furthermore, please prepare a short oral presentation (5–10 minutes) of your results to be delivered on the 31st of January 2020 between 13h00 and 17h00. We meet in room MNO 1.010 of the 'Maison du Nombre' on Campus Belval.
